

REMARKS/ARGUMENTS

Claims 1-3 were in the application. In the last office action, claims 1-3 were rejected under 35 U.S.C. § 103 as obvious over U.S. Patent Publication No. 2005/0047124A1 by Hsien in view of U.S. Patent No. 6,206,543 to Henry.

Reconsideration of the rejection is respectfully requested for the following reasons.

In the office action, the Examiner expressed the understanding that "Hsien discloses . . . [a] moving manipulate member being connected to and moved along the fixing member (slides along the member 34). . . ." As can be seen in Fig.2 of Hsien, no part of Hsien's construction slides along the member 34. In fact all of the components in Hsien's assembly are fixed with the following exception. "[T]he locking strip 22 of the illumination device 11 can be rotated with the rotary body 21 and can be inserted into and locked in the locking groove 32 of the positioning body 31." Par. [0042]. That is, the lamp can be rotated vertically to point upwardly, straight ahead, or downwardly. See Par. [0048].

Henry merely discloses a clip for attaching a flash light to a cap. Mounting Hsien's assembly on a cap in accordance with Henry's teachings does not result in applicant's invention.

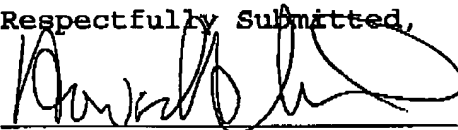

In view of the above, withdrawal of the rejection of claims 1-3 is earnestly solicited.

Claims 1-3 which were translated from Korean, have now been amended solely for consistency with U.S. idiom.

Claims 4 - 7 have been newly added to recite further features of the invention related to the apparatus for moving the lamp toward and away from the face of the wearer of the cap.

In view of the foregoing, it is respectfully submitted that the application is now in condition for allowance. Early and favorable action is earnestly solicited.

Respectfully Submitted,

Howard F. Mandelbaum
